

Java

```
class Solution {  
    public String getHint(String secret, String guess) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} secret  
 * @param {string} guess  
 * @return {string}  
 */  
var getHint = function(secret, guess) {  
  
};
```

TypeScript

```
function getHint(secret: string, guess: string): string {  
  
};
```

C++

```
class Solution {
```

```
public:
    string getHint(string secret, string guess) {

    }
};
```

C#

```
public class Solution {
    public string GetHint(string secret, string guess) {

    }
}
```

Kotlin

```
class Solution {
    fun getHint(secret: String, guess: String): String {

    }
}
```

Go

```
func getHint(secret string, guess string) string {

}
```
